

PLEASE - NO BACKSCATTER (MEDICAL REASONS)

Thank you for your assistance.

After seeing a newscast with interviews from experts in the field of physics, radiation and imaging by

AfterthePress.com,

I would like to request not to be screened with a backscatter device, but rather via

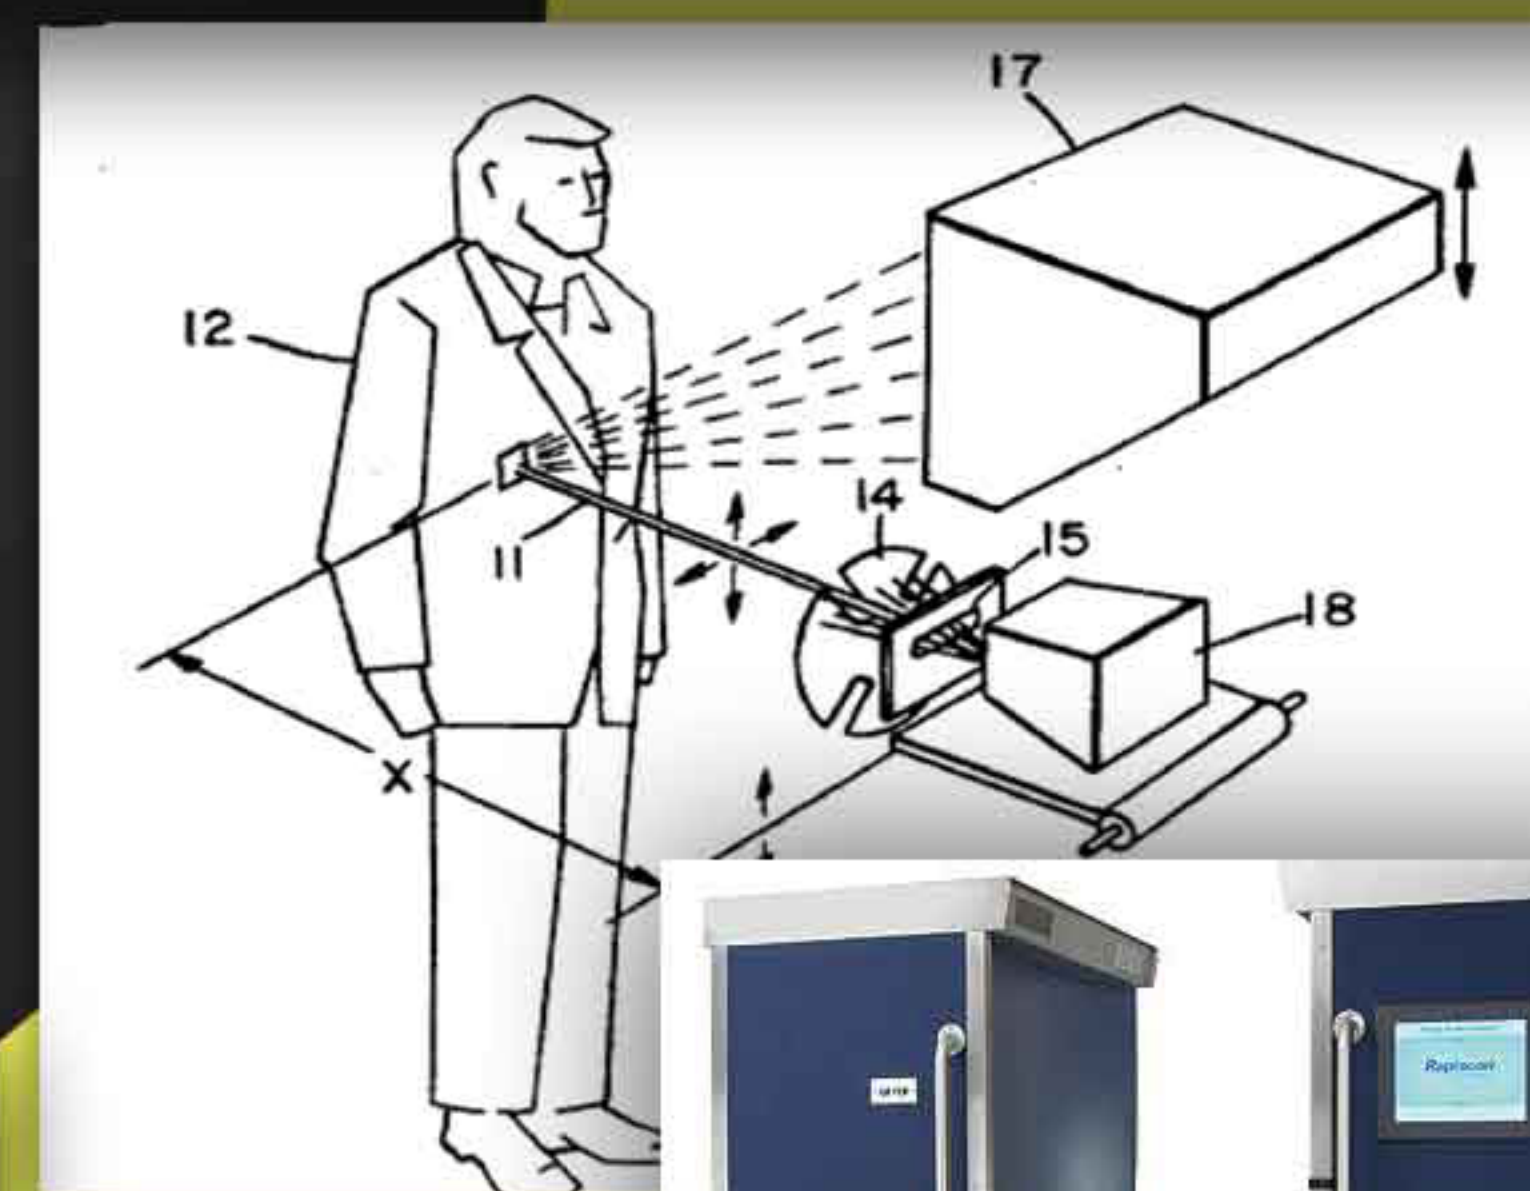

AN ALTERNATIVE METHOD

I would also like to recommend that this be passed on to any TSA agent helping to screen passengers with a backscatter device. Measurements have shown that a significant "scatter dose" is likely when maintaining visual contact with a screenee in order to assist him or her in holding position while being screened.

I recommend this public youtube report for those within 3 feet of the machine.
